

The Partnership Model: Technical + Governance Strength

INVESTOR INSIGHTS | OPERATIONS & GOVERNANCE

Charge Capital is the umbrella platform that unites development, operations, installation, and investor governance into a single, integrated company. We both execute projects and steward investor capital — with formal decision rights at the project level. The result is tight alignment between capital and day-to-day execution.

Our Integrated Divisions

- **Development & Operations (Xura)** – Site selection, system design, permitting, interconnection, and long-term operations.
 - **Installation & Field Execution (Woodhollow)** – EV & battery deployment, incentive capture, and municipal coordination.
 - **Capital & Investor Oversight (GSH)** – Capital raising, fund management, governance, and investor relations.
-

How the Unified Platform Creates Value

- **Alignment through governance** – Charge Capital holds board-level decision rights across project entities, tying investment oversight directly to operating milestones and budgets.

- **Faster, clearer decisions** – Integrated teams mean no handoffs between “partners,” reducing misalignment and delays.
 - **Risk management** – Standardized controls for spend, schedule, and vendor selection help avoid costly deviations.
 - **Investor access & transparency** – Reporting, compliance, and investor relations all run through Charge Capital, while execution is delivered by our integrated operations teams.
-

The Governance Advantage

Like pairing EV charging with BESS to boost economics, pairing capital oversight with in-house development and execution boosts project quality: disciplined budgets, accountable timelines, and repeatable outcomes across a growing fleet of assets.

Bottom Line

Charge Capital is a single, unified platform: one team that builds and operates projects while safeguarding capital through disciplined governance. This structure delivers reliable, scalable energy infrastructure with investor-grade oversight on every project.
